

I respectfully ask the elected members the Senate and House of Representatives to vote against any bills that would eliminate local weather and traffic conditions from Satellite Radio. Locals will listen to their Radio Stations but us who travel through the country have a national/local access through Satellite Radioto. We can obtain this information without finding out what stations and when this will be carried on. Most of the FM the stations don't today have a very large area of coverage. Plans are made hours and days in advance far from access to these stations if you can find them. We need this great improvement offered by Satellite Radio for our safety and good planning. Whatr a short sighted action to take to protect free enterprise against competition at the little guys expense.
